screens

① Fridge screen
- should allow for orginization ie veggies, fruits, frozen, drinks etc
- should also allow for searching for specific things
- Allows for deletion of items once they are thrown out

② Shopping List [should probably do this first cause its the simplest]
  - literally just a list of a of items we want to get
    - may want to add a list that also talks abt used up items
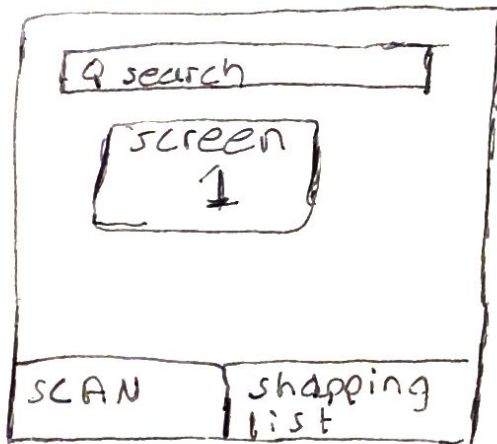

③ QR/barcode scanner → could be a part of ①
- similas to the way myFitness Pal does it

How to switch between the screens

- hamburger menu? → see expo navigation for getting this to work
- could also do a 3 page tab thing but I prefer the hamburger menu
  - parents are older tho 500... should check w/ them
  - lol they prefer the 3 tab thing

①

How the App should look [rough sketch]
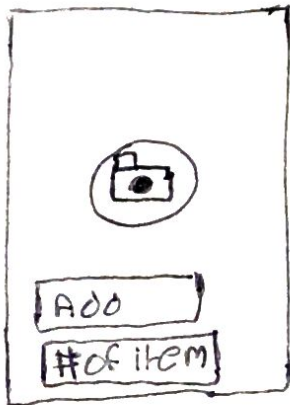

opens to Fridge screen !
